Majid Aldarraji

App Name: FinalApp\_Aldarraji\_Majid

Color palette Choice:

colors I picked are used to give a calming feeling by using relative colors like dark blue(#242747) for the primary color and a accent color of light blue (#36B5B5) and a background color of black relative to blue(#161A1E) and a secondary color of a dark shade of yellow (#655F17 dark mode)(#FFF5D6 light mode) those colors give the user a sense of comfort and the user is able to look at the app at night after watching a film or a show without it being very bright and a good contrast between colors for readability.

Font Selection:

Used the standard font SF Pro font system to give it a feel of a native app and familiarity also the font is great of its readability and in the apple ecosystem its preferable.

After Beta updates:

Added splash and app icon

Revamped the color system to have better readability and a more consistent color pallet

Fixed bug where diary view is not loading logs

Added comments to code

Profile screen design and functionality

Search for users using the @ in the search tab

Added actual data to discover page

Added more details to the diary logs and how they appear
